

FIRE FOR PERFECT MOMENTS

THE INNOVATION 2025: THE RIKA PELLET PATIO HEATER TERRA

FIRE UNDER THE OPEN SKY

UNIQUE WARMTH FOR TRULY SPECIAL MOMENTS.

With TERRA, RIKA takes its decades of expertise in pellet stoves to an entirely new level. The first RIKA patio heater combines premium materials with state-of-the-art features, creating a truly unique outdoor experience. Thanks to its smart design and eco-friendly operation using wood pellets, TERRA is not only independent of power sources, but also offers maximum flexibility in placement. Rarely has fire been showcased so elegantly.

The harmonious interplay of blazing flames and cozy warmth makes TERRA not only a practical but also an aesthetic enrichment for any outdoor space. The combination of crisp, cool air and warming fire transforms being outdoors into an extraordinary experience. This fascinating contrast creates a powerful sensory moment: Fresh air invigorates the mind, while the comforting warmth of the fire relaxes the body. Especially on cooler days or after sunset, this interplay has a calming, grounding, and mood-lifting effect.

TIMELESSLY
BEAUTIFUL

ELEGANCE, COMFORT AND SUSTAINABILITY IN PERFECT HARMONY

The patio heater creates an impressive atmosphere both in private settings and in gastronomy or at events. With its elegant design and powerful technology, it makes an excellent impression everywhere – whether on a home terrace, in a cozy café or at large events. A true highlight that brings warmth and comfort wherever it is used.

ELEGANT &

TERRA is powered by eco-friendly wood pellets and requires no electricity connection. This makes it highly versatile and freely positionable – whether on the terrace, in the garden, or on the balcony. Thanks to integrated wheels at the base, the patio heater can be conveniently moved and realigned as needed. Heating sustainably with wood pellets means not only enjoying warmth, but also making an active contribution to environmental protection. The CO₂ released during combustion is reabsorbed during the growth of the trees, resulting in a balanced carbon footprint. This makes heating both efficient and environmentally friendly – a perfect choice for those who want to enjoy warmth with a clear conscience.

IGNITE YOUR FIRE EXPERIENCE IN AN INSTANT

1

The integrated pellet tank holds up to 7.5 kg of pellets

2

RIKA eco firelighter for easy ignition of the filled pellets

3

Ignite the pellets

4

Put the glass hood back on and enjoy the warmth

3

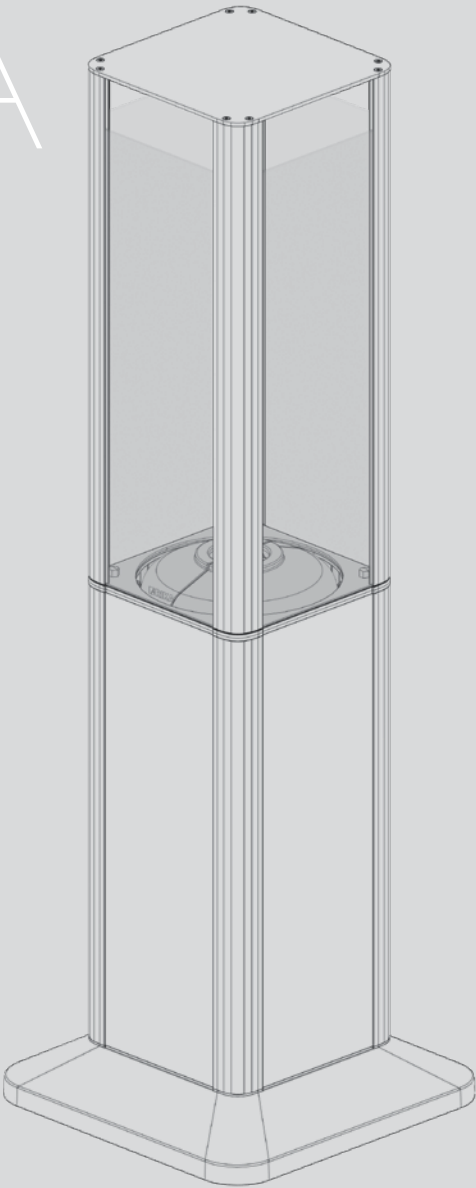

4

Filling is particularly easy: the one-piece glass hood is removed, the pellets are poured into the lower container and then ignited. In no time, a large flame develops and radiates cozy warmth around the patio heater. Cleaning is just as simple: the ash can be emptied from above or removed with an ash vacuum. A well-thought-out air circulation system ensures that the glass panels stay clean longer, reducing cleaning effort to a minimum. Additionally, TERRA is equipped with a specially developed, weather- and heat-resistant surface that provides lasting protection against external influences. With its slim, minimalist design, TERRA blends harmoniously into stylish outdoor areas and becomes an exclusive highlight for relaxed moments outdoors.

PATIO HEATER TERRA

TECHNICAL DATA¹

Height	1500	mm
Width	474	mm
Depth	474	mm
Weight	~43	kg
Full filling	~7,5	kg
Half filling	~3,5	kg
Heat output ²	6	kW
Fuel consumption	~1,2	kg/h
Burn time ³	~3	h
Burn-out phase ³	~3	h
Total operating time	~6	h

¹ Values based on full burner cassette.. ² Dependent on burn time.
³ May vary due to multiple factors such as pellet quality, weather conditions, humidity, and ambient temperature.

EFFICIENT COMBUSTION AND LONG-LASTING HEAT

The integrated pellet tank holds up to 7.5 kg of pellets, which corresponds to about half a standard pellet sack and provides a burn time of more than two and a half hours. Alternatively, half the amount of pellets can be used by inserting an additional grate at a higher level, allowing for easier top ignition. In this case, the burn time is reduced accordingly.

After combustion, the terrace heater retains heat for some time, leaving a pleasant residual warmth. Only then should the ash be removed, new pellets added, or a protective cover put in place.

ADVANTAGES OF TERRA AT A GLANCE

- + Cordless operation
- + Beautiful, steady flame
- + Smokeless combustion
- + Removable glass hood
- + Convenient top pellet filling
- + Easy cleaning of glass panels
- + Burning time of up to 3 hours
- + Variable pellet fill level
- + Premium materials
- + Weather-resistant surface
- + Equipped with wheels for easy mobility
- + Minimalist design
- + Protective cover available as accessory
